

**NAME:- YASH RAJENDRA GAIKWAD**  
**DATA ANALYTICS TRAINEE**  
**PROJECT 2:- INSTAGRAM USER ANALYTICS**  
**SOFTWARE USED:- MY SQL WORKBENCH 8.0 CE**

### **TASK:-**

#### **A) Marketing Analysis:-**

- 1) Loyal User Reward.
- 2) Inactive User Engagement.
- 3) Contest Winner Declaration.
- 4) Hashtag Research.
- 5) Ad Campaign Launch.

#### **B) Investor Metrics:-**

- 1) User Engagement.
- 2) Bots And Fake Accounts.

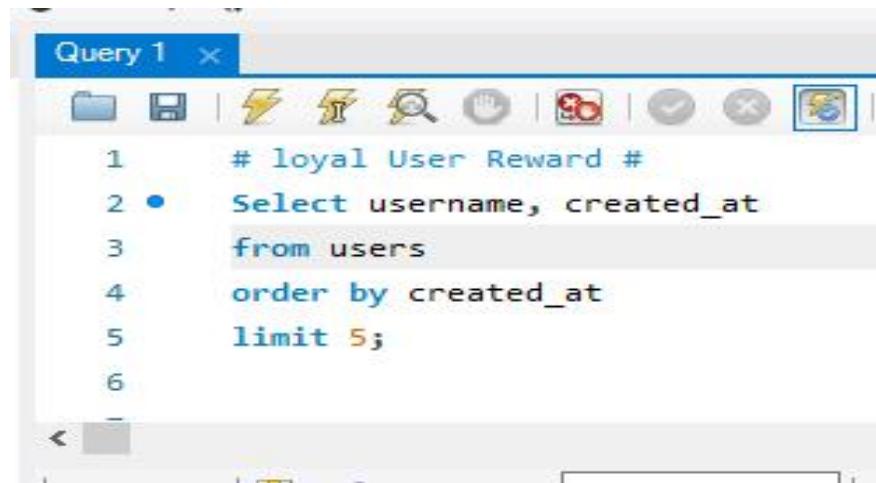

## A) MARKETING ANALYSIS

**1) Loyal User Reward:-** Identify the five oldest users on instagram from the provided database.

- Process:-
  - First we Import the Database in to the MySQL.
  - Now we use the data from the users table by selecting the username and created\_at columns.
  - Then we use the order by function so, we get order of the desired output by sorting it with the created\_at column in ascending order.
  - lastly we use the limit function, so that we will get only top 5 oldest Instagram users as a output.

➤ Query

```
Query 1
1      # loyal User Reward #
2 •  Select username, created_at
3   from users
4   order by created_at
5   limit 5;
6
```

➤ Result:- Finally, we get the Top 5 Most Loyal Instagram users.

| username         | created_at          |
|------------------|---------------------|
| Darby_Herzog     | 2016-05-06 00:14:21 |
| Emilio_Bernier52 | 2016-05-06 13:04:30 |
| Elenor88         | 2016-05-08 01:30:41 |
| Nicole71         | 2016-05-09 17:30:22 |
| Jordyn.Jacobson2 | 2016-05-14 07:56:26 |

**2) Inactive Users Engagement:-** Identify the users who have never posted a single photo on Instagram.

- Process:-
- We will first select username, users.id and user\_id column from the users table.
- Then we will left join photos table on the users table, on users.id = photos.user\_id.
- We use it because, both the users.id and photos.user\_id have common contents in them.
- Then we will find rows from the users table where the photos.id is null.
- Lastly we use order by usier.id function and we will gwt the users who have never posted a single photo on Instagram.

➤ Query:-

```
8      # Inactive user Engagement #
9 •  select username, users.id as user_id
10     from users
11     left join photos
12       on users.id=photos.user_id
13     where photos.id is null
14     order by users.id;
15
```

➤ Result:- There are total 26 Instagram users who have never posted a single photo on Instagram.

| user_id | username            |
|---------|---------------------|
| 5       | Aniya_Hackett       |
| 7       | Kassandra_Homenick  |
| 14      | Jadyn81             |
| 21      | Rocio33             |
| 24      | Maxwell.Halvorson   |
| 25      | Tierra.Trantow      |
| 34      | Pearl7              |
| 36      | Ollie_Ledner37      |
| 41      | Mckenna17           |
| 45      | David.Osinski47     |
| 49      | Morgan.Kassulke     |
| 53      | Linnea59            |
| 54      | Duane60             |
| 57      | Julien_Schmidt      |
| 66      | Mike.Auer39         |
| 68      | Franco_Keebler64    |
| 71      | Nia_Haag            |
| 74      | Hulda.Macejkovic    |
| 75      | Leslie67            |
| 76      | Janelle.Nikolaus81  |
| 80      | Darby_Herzog        |
| 81      | Esther.Zulauf61     |
| 83      | Bartholome.Bernhard |
| 89      | Jessyca_West        |
| 90      | Esmeralda.Mraz57    |
| 91      | Bethany20           |

**3) Contest Winner Declaration:-** Determine the winner of the contest and provide their details to the team.

➤ **Process:-**

- First we will select the users.id as user\_id, users.username, photos.id as photo\_id, photos.image\_url and count(\*) as total from photo.
- 2. Then, we will use the inner join the three tables wiz : photos, likes and users, on likes.photo\_id = photos.id and photos.user\_id = users.id.
- 3. Then, we use the group by function so we will get the output on the basis of photos.id
- 4. After that we use order by function so we will get the data on the basis of the total in descending order
- 5. Finally, we will using limit function to view only the top liked photo's information

- **Query And Result:-** After Analysis, we find that **Zack\_Kemmer93** is winner of Contest.

```
16      # Contest Winner Declaration #
17 •  Select users.id as user_id, users.username,photos.id as photo_id,
18      photos.image_url, count(*) as total
19      from photos
20      inner join likes
21      on likes.photo_id = photos.id
22      inner join users
23      on photos.user_id = users.id
24      group by photos.id
25      order by total desc
26      limit 1;
```

< [ ]

Result Grid | Filter Rows:  Export: Wrap Cell Content: Fetch rows:

|   | user_id | username      | photo_id | image_url           | total |
|---|---------|---------------|----------|---------------------|-------|
| ▶ | 52      | Zack_Kemmer93 | 145      | https://jarret.name | 48    |

**4) Hashtag Research:-** Identify and suggest the top five most commonly used hashtags on the platform.

➤ **Process:-**

- To find the top 5 most commonly used hashtags on Instagram first we need to select the tag\_name column from the tag table.
- We use the count(\*) as total\_number\_of\_times\_tag\_used\_individually so as to count the number of tags used individually.
- Then, we use the join function for tags table and photo\_tags table, on tags.id = photo\_tags.tag\_id cause they contain the same content in them i.e. tag\_id
- After that we use group by function to get the desired output on the basis of tags.tag\_name
- Then using the order by function we need to sort the output on the basis of total(total number of tags per tag\_name) in descending order
- Finally, to find the top 5 most used tag names we will use the limit 5 function.

➤ **Query:-**

```
# Hashtag Research #  
  
select tags.tag_name, count (*) as total_number_of_times_tag_used_individually  
from tags  
join ig_photo_tags  
on tags.id = photo_tags.tag_id  
group by tags.tag_name  
order by total_number_of_times_tag_used_individually desc  
limit 5;
```

- **Result:- After analysis we find that the Smile is the most used Hashtag followed by beach, party, fun, concert.**

| tag_name | total_number_of_times_tag_used_individually |
|----------|---------------------------------------------|
| smile    | 59                                          |
| beach    | 42                                          |
| party    | 39                                          |
| fun      | 38                                          |
| concert  | 24                                          |

**5) Ad Campaign Launch:-** Determine the day of the week when most users register on instagram. Provide insights on when to schedule an ad campaing.

➤ **Process:-**

- To launch the Ad Campaign we have to find the day of week on which most users register on Instagram.
- First we need to define the columns of the desired output table using select dayname(created\_at) as day\_of\_week.
- Same we use for the count(\*) as total\_number\_of\_users\_registered from the users table
- Then we use the group by function so we get the output table on the basis of day\_of\_week.
- Lastly we use the order by function we sort the output table on the basis of total\_number\_of\_users\_registered in descending order.

## ➤ Query:-

```
39      # Ad Campaign Launch #
40
41 •   SELECT
42      DAYNAME(created_at) AS day_of_week,
43      COUNT(*) AS number_of_users_registered
44  FROM
45      users
46  GROUP BY day_of_week
47  ORDER BY number_of_user_registered DESC;
48
```

➤ **Result:-** After the analysis we find that most of the users registered on Thursday and Sunday. So, it would be beneficial to start Ad on Thursday and Saturday,

| day_of_week | total_number_of_users_registered |
|-------------|----------------------------------|
| Thursday    | 16                               |
| Sunday      | 16                               |
| Friday      | 15                               |
| Tuesday     | 14                               |
| Monday      | 14                               |
| Wednesday   | 13                               |
| Saturday    | 12                               |

## B) INVESTOR METRICS

**1) User Engagement:-** Calculate the average number of posts per user on instagram. Also, provide the total number of photos on instagram divided by the total number of users.

- **Process:-**
- In this we need to perform two operations
  - ❖ **First Case**
  - First, we need to find first the count number of photos(posts) that are present in the photos.id column of the photos table i.e. count(\*) from photos.
  - Similarly, we need to find the number of users that are present in the users.id column of the users table i.e. count(\*) from users.
  - We divide both the values count(\*) from photos/count(\*) from users and hence we would get the total number of photos / total number of users.
  - Lastly how many times the users posts on Instagram we need to find the total occurrences of each user\_id in photos table

- **Quary And Result For First Case:-** After the analysis we found out that the average user posts around 2.57 times on the Instagram.

```
50      # User Investment #
51
52 •   SELECT
53     (SELECT
54       COUNT(*)
55     FROM
56       photos) / (SELECT
57       COUNT(*)
58     FROM
59       users) AS avg_post_on_instagram;
```

| avg_post_on_instagram |
|-----------------------|
| 2.5700                |

- ❖ **Second Case**
- In second case we need to find the total number of photos on Instagram OR the total number of users.
- First we Select the user\_id also we use the count(\*) function to find the number of photos on Instagram OR the total number of users and name it as user\_post\_count from the photos
- Then, we use the group by function to get the output table according to the user\_id.
- Lastly, we use the order by function to sort the output tabe by user\_id

➤ **Query:-**

```
```
61      # User Engagement 2 #
62
63 •  SELECT
64      user_id, COUNT(*) AS user_post_count
65  FROM
66      photos
67  GROUP BY user_id
68  ORDER BY user_id;
```

➤ **Result:- This is the list of Total number of photos on instagram OR the total number of users on Instagram.**

| user_id | user_post_count | user_id | user_post_count | user_id | user_post_count | user_id | user_post_count |
|---------|-----------------|---------|-----------------|---------|-----------------|---------|-----------------|
| 1       | 5               | 27      | 1               | 50      | 3               | 77      | 6               |
| 2       | 4               | 28      | 4               | 51      | 5               | 78      | 5               |
| 3       | 4               | 29      | 8               | 52      | 5               | 79      | 1               |
| 4       | 3               | 30      | 2               | 55      | 1               | 82      | 2               |
| 6       | 5               | 31      | 1               | 56      | 1               | 84      | 2               |
| 8       | 4               | 32      | 4               | 58      | 8               | 85      | 2               |
| 9       | 4               | 33      | 5               | 59      | 10              | 86      | 9               |
| 10      | 3               | 35      | 2               | 60      | 2               | 87      | 4               |
| 11      | 5               | 37      | 1               | 61      | 1               | 88      | 11              |
| 12      | 4               | 38      | 2               | 62      | 2               | 92      | 3               |
| 13      | 5               | 39      | 1               | 63      | 4               | 93      | 2               |
| 15      | 4               | 40      | 1               | 64      | 5               | 94      | 1               |
| 16      | 4               | 42      | 3               | 65      | 5               | 95      | 2               |
| 17      | 3               | 43      | 5               | 67      | 3               | 96      | 3               |
| 18      | 1               | 44      | 4               | 69      | 1               | 97      | 2               |
| 19      | 2               | 46      | 4               | 70      | 1               | 98      | 1               |
| 20      | 1               | 47      | 5               | 72      | 5               | 99      | 3               |
| 22      | 1               | 48      | 1               | 73      | 1               | 100     | 2               |
| 23      | 12              |         |                 |         |                 |         |                 |
| 26      | 5               |         |                 |         |                 |         |                 |

**2) Bot And Fake Accounts:-** Identify users (potential bots) who have liked every single photo on the site, as this is not typically possible for a normal user.

➤ **Process:-**

- To find the bots and fake accounts First, we select the user\_id column from the photos table and the username column from the users table
- Then, we use the count(\*) function to count the total number of likes from the likes table.
- After that we use the inner join function on users and likes table on the basis of users.id and likes.user\_id.
- Now we use the group by function so that we get the output table on the basis of likes.user\_id.
- Lastly, we search for the values from the cout(\*) from photos having equal values with the total\_likes\_per\_user.

## ➤ Query:-

```
70      # Bot and Fake Accounts #
71
72 •   SELECT
73      user_id, username, COUNT(*) AS total_likes_per_user
74  FROM
75      users
76      INNER JOIN
77      likes ON users.id = likes.user_id
78  GROUP BY likes.user_id
79  HAVING total_likes_per_user = (SELECT
80      COUNT(*)
81  FROM
82      photos);
```

## ➤ Result:- After analysis we find the Bots and Fake accounts.

| user_id | username           | total_likes_per_user |
|---------|--------------------|----------------------|
| 5       | Aniya_Hackett      | 257                  |
| 14      | Jadlyn81           | 257                  |
| 21      | Rocio33            | 257                  |
| 24      | Maxwell.Halvorson  | 257                  |
| 36      | Ollie_Ledner37     | 257                  |
| 41      | Mckenna17          | 257                  |
| 54      | Duane60            | 257                  |
| 57      | Julien_Schmidt     | 257                  |
| 66      | Mike.Auer39        | 257                  |
| 71      | Nia_Haag           | 257                  |
